MS Access 2007: Retrieve Top N records from a query

Question: In Microsoft Access 2007, I'd like to retrieve only the first 6 records from a query. How can I do this? Answer: We'll demonstrate how to do this with an example below. We have a query as follows: As you can see that we get more than 6 records returned. To limit the results of this Access query to only display the first 6 records, we need to open the query in Design view.

MS Access 2007: Update Query that updates values in one

Question: In Microsoft Access 2007, I'm trying to update about 6000+ records from one table with values from another table, but I'm having problems. Actually I am trying to update the Bot table MFG with the Big table MFG when Big.PART = Bot.PART. The query I'm using is: UPDATE Bot SET Bot.MFG = (SELECT Big.MFG FROM Big WHERE Big.PART = Bot.PART) WHERE ...

Microsoft Access - Wikipedia

Microsoft Access is a database management system (DBMS) from Microsoft that combines the relational Microsoft Jet Database Engine with a graphical user interface and software-development tools. It is a member of the Microsoft 365 suite of applications, included in the Professional and higher editions or sold separately. Microsoft Access stores data in its own...

Introduction to Access programming - support.microsoft.com

In Access, programming is the process of adding functionality to your database by using Access macros or Visual Basic for Applications (VBA) code. For example, suppose that you have created a form and a report, and you want to add a command button to the form that, when clicked, opens the report.
