reception of such waves and their perception by sound abatement foam component in certain sleep and respiratory care devices Philips is initiating a voluntary recall notification* to ensure patient safety in consultation with regulatory agencies

**Equal Loudness Curves**
Sound B is above the 60 phon curve, so that implies that it would be perceived as louder than A or D. In fact, since sound B is at 1000Hz and has an intensity of 65 dB, we can say that its loudness is 65 phons. The perceived loudness at 1000 Hz is the reference point for defining the equal loudness curve through that point, so the numerical

**Sound - Wikipedia**
In physics, sound is a vibration that propagates as an acoustic wave, through a transmission medium such as a gas, liquid or solid. In human physiology and psychology, sound is the

the brain. Only acoustic waves that have frequencies lying between about 20 Hz and 20 kHz, the audio frequency range, elicit an auditory percept in humans.
