Technen: Elements of Recent History of Information Technologies with Epistemological Conclusions
Andrzej Piotr Wierzbicki
2014-07-25
The book expresses the conviction that the art of creating tools – Greek techne – changes its character together with the change of civilization epochs and co-determines such changes. This does not mean that tools typical for a civilization epoch determine it completely, but they change our way of perceiving and interpreting the world. There might have been many such epochs in the history of human civilization (much more than the three waves of agricultural, industrial and information civilization). This is expressed by the title Technen of the book, where n denotes a subsequent civilization epoch. During last fifty years we observed a decomposition of the old episteme (understood as a way of creating and interpreting knowledge characteristic for a given civilization epoch) of modernism, which was an episteme typical for industrial civilization. Today, the world is differently understood by the representatives of three different cultural spheres: of strict and natural sciences; of human and social sciences (especially by their part inclined towards postmodemism) and technical sciences that have a different episteme than even that of strict and natural sciences. Thus, we observe today not two cultures, but three different episteme. The book consists of four parts. First contains basic epistemological observations, second is devoted to selected elements of recent history of information technologies, third contains more detailed epistemological and general discussions, fourth specifies conclusions. The book is written from the
cognitive perspective of technical sciences, with a full awareness - and discussion - of its differences from the cognitive perspective of strict sciences or human and social sciences. The main thesis of the book is that informational revolution will probably lead to a formation of a new episteme. The book includes discussions of many issues related to such general perspective, such as what is technology proper; what is intuition from a perspective of technology and of evolutionary naturalism; what are the reasons for and how large are the delays between a fundamental invention and its broad social utilization; what is the fundamental logical error (using paradoxes that are not real, only apparent) of the tradition of sceptical philosophy; what are rational foundations and examples of emergence of order out of chaos; whether civilization development based on two positive feedbacks between science, technology and the market might lead inevitably to a self-destruction of human civilization; etc.

The Malleus Maleficarum Heinrich Kramer 2007-04-01 "A handbook for hunting and punishing witches to assist the Inquisition and Church in exterminating undesirables. Mostly a compilation of superstition and folklore, the book was taken very seriously at the time it was written in the 15th century and became a kind of spiritual law book used by judges to determine the guilt of the accused"--From publisher description.

What is to be done? V.I. Lenin 1935 “The pamphlet... outlined a broad plan of organisation in which everyone would find a place for himself, become a cog in the revolutionary machine, a cog, which, no matter how small, was vital to the working of the machine. The pamphlet urged the necessity of intensive and tireless efforts to build the foundation that had to be built if the Party was to exist in deeds and not in words...” (Nadezhda Krupskaya, Reminiscences of Lenin.) First published in early 1902, What Is to Be Done? remains a classic of Marxism on the building of the revolutionary party, which sets out the party’s role as the organiser and director of the revolution. The pamphlet was written as part of a conflict with the opportunism of the Economists, who emphasised ‘bread and butter issues’ rather than theory. Lenin uses the book to explain the necessity of creating a centralised group of professional and dedicated revolutionary cadres before the “times of explosion and outbursts.” The history of the past 100 years has proven Lenin right: time and again, the masses have been ready to struggle, but let down by their leadership. Today, many working-class people are beginning to reject the status quo and are looking to socialist ideas as an alternative. It is the duty of Marxists to build
an organisation capable of offering a way forward, and What is to Be Done? represents an excellent guide as to how to do this. With a new introduction by Rob Sewell. **Leviathan** Thomas Hobbes 2018-08-22 Leviathan or The Matter, Forme and Power of a Common-Wealth Ecclesiastical and Civil is a book written by an English materialist philosopher Thomas Hobbes about problems of the state existence and development. Leviathan is a name of a Bible monster, a symbol of nature powers that belittles a man. Hobbes uses this character to describe a powerful state (“God of the death”). He starts with a postulate about a natural human state (“the war of all against all”) and develops the idea “man is a wolf to a man”. When people stay for a long time in the position of an inevitable extermination they give a part of their natural rights, for the sake of their lives and general peace, according to an unspoken agreement to someone who is obliged to maintain a free usage of the rest of their rights – to the state. The state, a union of people, where the will of a single one (the state) is compulsory for everybody, has a task to regulate the relations between all the people. The book was banned several times in England and Russia.

**Science and Technology in Medicine** Andras Gedeon 2007-12-31 The history and evolution of the fields of science and medicine are symbiotically linked and thus are mutually dependent. Discoveries in one domain have allowed for progress in the other, and it is nearly impossible to study one area in isolation. The influence of science and technologic discoveries on medicine has profoundly impacted the way physicians practice and has resulted in an extended life expectancy and quality of life that our ancestors never dreamed possible. Science and Technology in Medicine is a collection of 99 essays based on landmark publications that have appeared in the medical literature over the past 500 years. Each essay includes a summary of the article or chapter; text and images reproduced directly from the original source; a short biography of the author(s); and a discussion about the significance of the discovery and its subsequent influence on later developments. Original material by the likes of Dürer, Bernoulli, Doppler, Pasteur, Trendelenburg, Curie and Röntgen offers readers a rare glimpse at publications housed in archives around the world, beautifully reproduced in one fascinating volume.

Should she stay mortal and strengthen her connection to the werewolves, or leave it all behind to become a vampire? When you loved the one who was killing you, it left you no options. How could you run, how could you fight, when doing so would hurt that beloved one? If your life was all you had to give, how could you not give it? If it was someone you truly loved? To be irrevocably in love with a vampire is both fantasy and nightmare woven into a dangerously heightened reality for Bella Swan. Pulled in one direction by her intense passion for Edward Cullen, and in another by her profound connection to werewolf Jacob Black, a tumultuous year of temptation, loss, and strife have led her to the ultimate turning point. Her imminent choice to either join the dark but seductive world of immortals or to pursue a fully human life has become the thread from which the fates of two tribes hangs. This astonishing, breathlessly anticipated conclusion to the Twilight Saga illuminates the secrets and mysteries of this spellbinding romantic epic. **A Pattern Language** Christopher Alexander 2018-09-20 You can use this book to design a house for yourself with your family; you can use it to work with your neighbors to improve your town and neighborhood; you can use it to design an office, or a workshop, or a public building. And you can use it to guide you in the actual process of construction. After a ten-year silence, Christopher Alexander and his colleagues at the Center for Environmental Structure are now publishing a major statement in the form of three books which will, in their words, "lay the basis for an entirely new approach to architecture, building and planning, which will we hope replace existing ideas and practices entirely." The three books are The Timeless Way of Building, The Oregon Experiment, and this book, A Pattern Language. At the core of these books is the idea that people should design for themselves...
their own houses, streets, and communities. This idea may be radical (it implies a radical transformation of the architectural profession) but it comes simply from the observation that most of the wonderful places of the world were not made by architects but by the people. At the core of the books, too, is the point that in designing their environments people always rely on certain "languages," which, like the languages we speak, allow them to articulate and communicate an infinite variety of designs within a forma system which gives them coherence. This book provides a language of this kind. It will enable a person to make a design for almost any kind of building, or any part of the built environment. "Patterns," the units of this language, are answers to design problems (How high should a window sill be? How many stories should a building have? How much space in a neighborhood should be devoted to grass and trees?). More than 250 of the patterns in this pattern language are given: each consists of a problem statement, a discussion of the problem with an illustration, and a solution. As the authors say in their introduction, many of the patterns are archetypal, so deeply rooted in the nature of things that it seemly likely that they will be a part of human nature, and human action, as much in five hundred years as they are today.

**A History of the Middle Ages, 300–1500**

John M. Riddle

2016-02-25

This clear and comprehensive text covers the Middle Ages from the classical era to the late medieval period. Distinguished historian John Riddle provides a cogent analysis of the rulers, wars, and events—both natural and human—that defined the medieval era. Taking a broad geographical perspective, Riddle includes northern and eastern Europe, Byzantine civilization, and the Islamic states. Each, he convincingly shows, offered values and institutions—religious devotion, toleration and intolerance, laws, ways of thinking, and changing roles of women—that presaged modernity. In addition to traditional topics of pen, sword, and word, the author explores other driving forces such as science, religion, and technology in ways that previous textbooks have not. He also examines such often-overlooked issues as medieval gender roles and medicine and seminal events such as the crusades from the vantage point of both Muslims and eastern and western Christians. In addition to a thorough chronological narrative, the text offers humanizing features to engage students. Each chapter opens with a theme-setting vignette about the lives of ordinary and extraordinary people. The book also introduces students to key controversies and themes in historiography by featuring in each chapter a prominent medieval historian and how his or her ideas have shaped contemporary thinking about the Middle Ages. Richly illustrated with color plates, this lively, engaging book will immerse readers in the medieval world, an era that shaped the foundation for the modern world.

**Sexuality in Medieval Europe**

Ruth Mazo Karras

2017-01-20

Challenging the way the Middle Ages have been treated in general histories of sexuality, Sexuality in Medieval Europe shows how views at the time were conflicted and complicated; there was no single medieval attitude towards sexuality any more than there is one modern attitude. Focusing on marital sexual activity, as well as behavior that was seen as transgressive, the chapters cover such topics as chastity, the role of the church, and non-reproductive activity. Combining an overview of research on the topic with original interpretations, Ruth Mazo Karras demonstrates that medieval culture developed sexual identities that were quite distinct from the identities we think of today, yet were still ancestral to our own. Using a wide collection of evidence from the late antique period until the fifteenth century, this fully revised third edition has been updated to include the latest scholarship throughout, including expanded coverage of Islamic and Jewish cultures and new ideas on how medieval sexual violence relates to the modern world. A new companion website supplements the text featuring an interactive timeline of...
key events, links to key primary sources, and references to further reading. Sexuality in Medieval Europe is essential reading for those who study medieval history and culture.

**Nineteenth-Century Verse and Technology** Jason David Hall 2017-09-13 This book repositions thinking about rhythm, meter and versification during the “Mechanical Age.” Cutting across disciplinary boundaries, the book examines the rhythmical workings of poems alongside not only Victorian theories of prosody and poetics but also contemporary thinking about labor practices, pedagogical procedures, scientific experiments, and technological innovations. By offering an exploded definition of meter—one that extends beyond conventional foot-based scansion—this book explicates the conceptual and, at times, material exchanges between poetic meter and machine culture. The machines of meter include mid-century theories of abstraction and technologies of smoothness and even spacing; a deeply influential, though rarely credited, system of metrical manufacture; verse produced by a Victorian automaton; the mechanics of the human body and mind and the meters that issued from them; and the promise of scientific machines to resolve metrical dilemmas once and for all.

This is the first European narrative history written by a woman - an account of the reign of a Byzantine emperor through the eyes and words of his daughter which offers an unparalleled view of the Byzantine world in the eleventh and twelfth centuries.

**The Gutenberg Elegies** Sven Birkerts 2006-11-14 "[A] THOUGHTFUL AND HEARTFELT BOOK...A literary cri de coeur--a lament for literature and everything implicit in it." --The Washington Post In our zeal to embrace the wonders of the electronic age, are we sacrificing our literary culture? Renowned critic Sven Birkerts believes the answer is an alarming yes. In The Gutenberg Elegies, he explores the impact of technology on the experience of reading. Drawing on his own passionate, lifelong love of books, Birkerts examines how literature intimately shapes and nourishes the inner life. What does it mean to "hear" a book on audiotape, decipher its words on a screen, or interact with it on CD-ROM? Are books as we know them dead? At once a celebration of the complex pleasures of reading and a boldly original challenge to the new information technologies, The Gutenberg Elegies is an essential volume for anyone who cares about the past and future of books. **From Gutenberg to the Internet** Jeremy M. Norman 2005 From Gutenberg to the Internet presents 63 original readings from the history of computing, networking, and telecommunications arranged thematically by chapters. Most of
the readings record basic discoveries from the 1830s through the
1960s that laid the foundation of the world of digital information
in which we live. These readings, some of which are illustrated,
trace historic steps from the early nineteenth century
development of telegraph systems---the first data networks---
through the development of the earliest general-purpose
programmable computers and the earliest software, to the
foundation in 1969 of ARPANET, the first national computer
network that eventually became the Internet. The readings will
allow you to review early developments and ideas in the history of
information technology that eventually led to the convergence of
computing, data networking, and telecommunications in the
Internet. The editor has written a lengthy illustrated historical
introduction concerning the impact of the Internet on book
culture. It compares and contrasts the transition from manuscript
to print initiated by Gutenberg’s invention of printing by
moveable type in the 15th century with the transition that began
in the mid-19th century from a print-centric world to the present
world in which printing co-exists with various electronic media
that converged to form the Internet. He also provided a
comprehensive and wide-ranging annotated timeline covering
selected developments in the history of information technology
from the year 100 up to 2004, and supplied introductory notes to
each reading. Some introductory notes contain supplementary
illustrations.

*A cultural history of chess-players* John Sharples 2017-08-15
This inquiry concerns the cultural history of the chess-player. It
takes as its premise the idea that the chess-player has become a
fragmented collection of images, underpinned by challenges to,
and confirmations of, chess’s status as an intellectually-superior
and socially-useful game, particularly since the medieval period.
Yet, the chess-player is an understudied figure. No previous work
has shone a light on the chess-player itself. Increasingly, chess-
histories have retreated into tidy consensus. This work aspires to
a novel reading of the figure as both a flickering beacon of reason
and a sign of monstrosity. To this end, this book, utilising a wide
range of sources, including newspapers, periodicals, detective
novels, science-fiction, and comic-books, is underpinned by the
idea that the chess-player is a pluralistic subject used to
articulate a number of anxieties pertaining to themes of mind,
machine, and monster.

*The Global Smartphone* Daniel Miller 2021-05-06
The smartphone is often literally right in front of our nose, so you would think we
would know what it is. But do we? To find out, 11 anthropologists
each spent 16 months living in communities in Africa, Asia,
Europe and South America, focusing on the take up of
smartphones by older people. Their research reveals that
smartphones are technology for everyone, not just for the young.
The Global Smartphone presents a series of original perspectives
deriving from this global and comparative research project.
Smartphones have become as much a place within which we live
as a device we use to provide ‘perpetual opportunism’, as they
are always with us. The authors show how the smartphone is
more than an ‘app device’ and explore differences between what
people say about smartphones and how they use them. The
smartphone is unprecedented in the degree to which we can
transform it. As a result, it quickly assimilates personal values. In
order to comprehend it, we must take into consideration a range
of national and cultural nuances, such as visual communication in
China and Japan, mobile money in Cameroon and Uganda, and
access to health information in Chile and Ireland – all alongside
diverse trajectories of ageing in Al Quds, Brazil and Italy. Only
then can we know what a smartphone is and understand its
consequences for people’s lives around the world.
