After a decade of rapid growth, the world’s most celebrated emerging markets are poised to slow down. Which countries will rise to challenge them? Ruchir Sharma, author of Breakout Nations, reveals why the last ten years were an anomaly for emerging markets. As investors look for new growth opportunities, Sharma identifies the countries that are poised to emerge as the next economic stars. He argues that the traditional model of economic growth, which relies on exports and low wages, is no longer sustainable. Instead, he argues, the key to success lies in innovation, education, and a focus on the middle class. In Breakout Nations, he shows why some emerging markets are poised to rise, while others are likely to decline. The book offers a compelling case for investors looking to diversify their portfolios and find opportunities in the next wave of economic growth.
