This study examines the literacy practices of college students in order to determine whether their reading habits are likely to detract from their future professions. Based on reports that many college students and individuals in general do not read regularly, this study examines numerous studies that focus on the reading habits of students and their attitudes toward reading. Findings show that a considerable number of students do not practice what many educators consider to be "good" reading habits; that is, they do not read approved print literature and tests regularly. This study also introduces the idea that perhaps students are supplementing traditional reading with engagement in new types of literacy, including digital literacy, which might still yield positive benefits that are commonly associated with reading in its traditional sense. Educators are called to adopt an expanded notion of literacy that would recognize the validity of new literacies in the lives of students. Viewing literacy in this way would promote literacy amongst students, providing them with valuable tools for their futures. Moreover, adopting an expanded definition of literacy would alter how aliteracy reports such as the ones discussed in this study would be assessed.
